Issue 15

MADE IN BRITAIN

Welcome to Verine

At Verine we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of premium gas fires to complement all tastes and lifestyles.

"I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Verine fires carry a 15 year guarantee to reflect my belief in their quality and durability, and our experienced Verine retailers are hand-picked to give you the very best advice and service.

Michael Dwyer

This brochure has been designed to make the purchase of your new Verine fire as simple as possible. I hope you will find it both informative and inspiring."

BFMEurope
BRITISH FIRE MANUFACTURERS

BRITISH MADE QUALITY

Verine is crafted by BFM Europe, the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Verine branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

Our 15 year guarantee†

From design stage to manufacture every effort is taken to produce an appliance that will provide exceptional and continued standards of safety and performance. Every fire is assessed and approved by leading independent organisations and rigorously checked by our Quality Control department before leaving our state-of-the-art facility.

Therefore, we are confident you'll be enjoying the warmth of a Verine fire for many years to come. That's why we are able to provide a remarkable 15 year Guarantee† with every gas fire, giving you reassurance and peace of mind. We will guarantee your fire for 15 years* against manufacturing and material defects, including parts and labour, subject to proof of annual service and replacement of the oxy-pilot assembly.

*Terms and conditions apply.

VERINE

FIRES TO INSPIRE

Beautiful fires, designed to allure

Choose a Verine fire and all your expectations will be fulfilled. Elegant, sophisticated and designed to perfection. Verine fires are all this and more. Crafted to not only captivate and beguile, they are built to the highest standards, are energy efficient and perform brilliantly.

Expect optimum quality & performance from your fire

Verine fires are built to last in our state-of-the-art UK manufacturing facility where our quality standards meet the stringent demands of ISO 9001/2000. That's why we are able to offer an impressive 15 year Guarantee on all gas fires.

Every fire in the range features a Flame Supervision Device (FSD) which detects the presence of a flame, and in the absence of that flame, prevents uncontrolled release of gas to the burner. For maximum safety each conventional flue model also includes an Oxygen Depletion Sensor (ODS) which shuts off the gas supply to the main burner in the unlikely event of a fault.

We recommend that all gas appliances be serviced by a Gas Safe Register engineer to ensure continued safe operation and optimum performance throughout the lifetime of the product. In order to encourage and promote this good practice, an annual service, including replacement of the oxy-pilot, is a condition of our 15 year Guarantee.

Expect the highest level of after sales service & expert advice

For over 45 years Verine have sold quality products and given quality service, elegance and innovation to the fireplace industry. Specially appointed retailers have been established nationally to display our products, install them and give expert advice to help you choose the correct appliance to suit your needs.

We want you to get the maximum benefit from this expertise and therefore recommend you avoid purchasing any Verine product over the internet, especially from companies not located in your area who are unable to offer the highest levels of aftersales service.

bsi. Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI).

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas, electrical, oil and solid fuel product testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

Before you begin

There is a Verine fire for all tastes, from traditional to contemporary chic. However, before you make your final selection, please take time to consider the following.

RADIANT OR CONVECTOR?

A radiant fire emanates heat from the combustion chamber only, which is why Verine radiant fires incorporate a glowing back panel to maximise heat output. A convector fire has the added benefit of a heat exchanger attached to the back of the fire. This draws cold air in and sends it back out into the room as hot air, maximising heat output whilst keeping your fuel bills down.

POWER

Your gas supply will either be Natural Gas or LPG, depending on the area in which you live.

Natural Gas
The most common gas supply

LPG
Alternative for houses with no Natural Gas supply

CHIMNEY OR FLUE?

Your choice of fire will be dictated by the type of chimney or flue you have. If you're not sure, then take a look at your roof and cross-reference it with the simple guide below. It is also worth noting that a slimline fire will fit virtually any chimney or flue, whereas a full-depth often requires a traditional chimney or rebate on the fire surround.

Brick Chimney
A conventional brick chimney is easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue
This is an interlocking metal flue tube system easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue
Built from concrete or clay blocks, pre-cast flues provide a rectangular section flue. They can be identified by a ridge vent or metal flue tube and terminal on the roof. All fires featuring this icon are suitable for Pre-Cast flues conforming to BS EN 1858.

NO CHIMNEY OR FLUE?

Some properties have no chimney or flue, in which case a balanced flue or powerflue is required.

Powerflue fires expel the flue gases directly outside the building through the use of an electronically driven fan unit mounted on the external wall. A sophisticated microprocessor monitors performance and automatically shuts off the fire in the unlikely event of operation failure.

Balanced Flue fires vent directly outside through a co-axial pipe (one pipe within a larger pipe). The outer pipe draws air in from the outside and the inner pipe expels combustion gases. An electricity supply is not required for these products. Please see installation manuals for further details about installation possibilities.

CONTROLS

Gas is wonderfully controllable, but which type of control suits you best? The discretion of manual ignition, concealed behind the removable ash pan... the convenience of slide control... or the luxury and style of remote control?

Manual Control
Simple and discreet. The control system is located behind the fires fire or trim. Once the fire is lit rotate the control knob to adjust the flame height and heat output.

Semi Remote Control
Light the fire using the manual control system located behind the fires trim or fret then use the remote control handset to adjust the flame height and heat output.

Slide Control
A convenient control system which is located on the top right-hand side of the fire. Push and hold the lever down to ignite and move it up and down to adjust the flame height and heat output.

Fully Remote Control
The remote control handset is used to light the fire as well as to adjust the flame height and heat output.

Fully Automatic Easy Flame Control (EFC) - Discreet, easy access buttons are used to ignite the fire and adjust heat and flame height.

Fully Remote with Thermostat
The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

Touchlight (T/L) - Only available on some power flue fires, this control is operated by two switches, On/Off and High/Low.

FIRE BACK PANEL

Some Verine fires offer you the option of a brick back panel, plain back panel or ribbed back panel – simply choose the one that suits your room from the options available.

high efficiency

Get up to 94% net efficiency from your gas fire

Verine has always had a reputation as a manufacturer of some of the most efficient fires on the market. Now we have set new industry standards with the introduction of the Verine HE high efficiency range: exceptional heat output combined with lower running costs compared to standard gas fires. Verine's R&D team has invested in developing the technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

Glass fronted HE fires

This type of high efficiency fire has a glass panel across the front of the fire which radiates the heat generated from the fuel bed directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, this makes glass fronted HE's the most efficient conventional flue fires available.

Open fronted HE fires

Orbis Plus.....	Pages 12-13
Midas Plus.....	8-9
Quasar Plus.....	10-11

Open fronted HE fires provide the look and feel of a real open fire with net efficiencies of up to 74%. This type of fire provides both radiant and convected heat. Radiant heat is emitted from the coal effect fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air through the gap above the canopy.

Balanced Flue HE fires

Elypse.....	Pages 38-39
Meridian BF.....	22-23
Fontana Compact BF.....	28-29
Fontana BF.....	30-34
Eden BF.....	34-35
Alpena.....	38-39
Marcello.....	40-41

Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home. A balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes. The radiant heat generated from the fuel-bed combines with convected heat, which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, making balanced flues one of the most efficient types of gas fires available.

The Midas Plus

The Midas Plus is one of the most efficient open-fronted slimline gas fires available today and with a heat output of up to 4.1kW it is also one of the warmest products suitable for a pre-cast flue.

The Midas Plus is available in a choice of manual, remote or our easy access Easy Flame control systems. This extremely versatile fire can be styled with a wide range of Verine trims, frets or fascias and with an optional pebble fuel bed it is easy to create a look to suit your existing décor. See pages 56 to 57 for more information about Verine accessories.

SPECIFICATIONS

Description	Slimline inset convector

The Marcello

This high efficiency balanced flue fire is perfect for modern homes without a chimney or flue and features a natural stone fuel bed. The Marcello can be wall hung or inset into most external walls* and is available with an optional stainless steel trim.

* An additional wall plate is required for inset applications.

SPECIFICATIONS

Description	Hang-on-the-wall balanced flue
Safety	Flame supervision device
Type of heat	Radiant & Convected
Heat input - high	4.8kW
Heat input - low	2.2kW
Heat output - high	4.2kW
Net Efficiency	up to 87%
Air vent required	Not normally required

Heat input and output figures are specific to natural gas models only

The Quasar

The Quasar has been specifically designed as a multi-installation fire and will fit most flue types including Pre-cast when fitted with a 3" rebated surround. It is also suitable for installation into a standard chimney without the need to remove the chairbrick. A pebble fuel effect can be purchased as an optional extra and a power flue version is available for homes with no chimney or flue.

The Orbis

With a maximum heat output of 4kW the Orbis is one of the warmest open-fronted convector fires in the Verine range. It features a mesmerising and highly realistic coal fuel bed making this product one of the closest things you can get to a real coal fire. This model is available with a choice of manual, slide or remote control operation and a wide range of trims and frets (see pages 56-57) ensuring you'll get the product that is just right for you.

The Verine Power Flue System

A gas fire creates a welcoming heart to any living room but many newer homes are being built without a chimney or flue so a conventional gas fire is not an option.

However, Power Flue gas fires have been specifically designed for homes without a conventional flue system providing a gas fuelled alternative heat source to an electric fire or radiator.

Several of the models in the Verine range are available as a Power Flue option and our unique Side Flue System available on the Midas means that you don't even need to install your fire on an outside wall – making this one of the most versatile gas fires on the market.

The Verine Slimline Fan System fully recessed into an outside wall leaving only a discreet 3" projection. 96mm and 183mm spacers are available if required.

BASIC POWER FLUE INSTALLATION EXAMPLE

DIMENSIONS OF POWERFLUE FIRES

	Quasar/Frontier	Midas
A	547mm	525mm
B	179mm	131mm
C	482mm	425mm (min)
D	360mm	3560mm
E	78mm	78mm
F Min/Max	570-715mm	222-692mm

Installation Possibilities

The drawings below show a selection of the many possible installation situations.

An example of a standard powerflue installation. The gas fire is flued directly through an outside wall via a straight, horizontal length of flue.

An example of a powerflue installation using three bends.

An example of a powerflue installation using a vertical section of flue pipe and two bends.

IMPORTANT

WARNING BFM Europe Limited is a Gas Safe Register company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase.

Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information.

Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types. We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure.

We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat.

In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.
