

Gas Fires Collection

Homeflame Harmony Black
Winner CORGI Award Best Gas Fire 2007
Homeflame range awarded a
Queen's Award for Enterprise: Innovation 2009

Millions of homes across the UK have stayed warm for over 100 years thanks to Valor, the country's leading manufacturer of fires.

Founded in 1890, when a Birmingham-based manufacturer began selling oil storage containers, attention soon turned to heating, with the production of oil heaters marking the birth of the first Valor heaters.

Outstanding technological developments and continual investment in product design over the years have kept Valor at the forefront of the heating industry.

1966 marked the production and sale of the first Valor radiant gas fire, followed just ten years later by the first 'living' flame gas fire complete with imitation fuel bed. A hugely significant turn in product design, the innovative 'living' flame fire once again proved Valor's position as a ground-breaking market leader.

Please note: All images within the brochure were correct at time of print. The actual product may change due to product development and therefore the image shown may not be an exact representation.

which fire is right for you?

We want you to enjoy your new Valor fire right from the very start.

That's why we've made it so easy for you to select the fire that's perfect for you and your home. Look at the pictures below and decide which one best matches the chimney at your home then, when you're reading through our brochure and find a fire you like, simply check it's suitable for the chimney at your property.

Brick built chimney (deep chimney)

Suitable for all fires, the classic brick-built chimney can handle fires with a deep bed right through to shallower slimline styles.

Prefabricated flue (deep flue)

Suitable for most fires, pre-fabricated flues are deep enough to take most of the deep models and all of the slimline styles.

Pre-cast flue (slimline flue)

Usually found in modern homes, pre-cast flues are suitable for a wide range of slimline fires. However, a number of deeper fires can be adapted for pre-cast flues with the use of a spacer kit.

Please note - some remedial building work may be required, please consult your builder or contact the technical team on the number at the back of the brochure.

No chimney or flue

Our wide range of gas and electric fires can be fitted in most homes, even if you have no chimney or flue we have a selection of fires for you. A separate brochure is available for our electric range.

Activeheat™ and radiant heat

All fires give out radiant heat. The heat moves outwards from the fire, so the closer you get to the fire the warmer you feel. Whilst this is suitable for most homes, creating additional warmth throughout the room can take some time. This is where Activeheat™ helps. Fires with Activeheat™ not only give out radiant heat but actively draw in the cold air from the room, pass it through a heat exchanger to warm it up and circulate it back around the room by means of natural convection.

FireSlide®

Fireslide top control enables you to turn the fire on, off, up or down, without kneeling down.

High Efficiency Gas Fires

Valor Fires are dedicated to the development of products which minimise their impact on the environment.

Standard inset convector fires have an energy efficiency of around 65% nett. Valor, however, has a large selection of high efficiency fires. With up to 89% nett efficiency, these fires convert more of the energy input in to a useable energy output and can be 38% less expensive to run.

Homeflame Range

Up to 89% efficiency and 4.3kW heat output, the Homeflame range is the benchmark in high efficiency fires. See pages 5 - 9

Balanced Flue

Balanced flue fires are room sealed, and are so called as they balance the level of incoming and outgoing air, which makes them very energy efficient. See pages 29 - 33

Outset / Radiants

Valor radiant fires offer 82% efficiency rating with heat you can feel, while Outset fires can have a coal effect living flame and achieve efficiencies up to 88%. See pages 34 - 40

Wood Burning

Valor's wood burning stoves offer up to 80% efficiency, with great heat outputs of up to 12kW. In addition, burning wood is a carbon neutral process, as no more carbon is released when wood is burned than the tree has absorbed from the atmosphere during its lifetime. See pages 41-44

Regardless of which fire you choose, using your fire instead of your central heating could help cut your overall fuel costs – as a gas fire uses much less energy than a boiler. Use your fire to heat the room you are in, and not your central heating to heat the whole house – allowing you to save energy and costs.

UP TO
89%**
EFFICIENT

The Valor Homeflame collection of fires are the most energy efficient, chimney installed living flame fires in the market.

UP TO
38%
LESS
EXPENSIVE

Valor Homeflame fires are up to 38% less expensive to run than other inset living flame gas fires on the market.*

UP TO
4.3kW
IMPRESSIVE
OUTPUT

With an exceptional efficiency rating of up to 89%, the Homeflame range offers homeowners an authentic way of reducing heating bills.

Valor Homeflame fires combine an exceptionally good looking gas fire with an impressive output of up to 4.3kW.

Valor Fires was presented with a Queens Award for Enterprise: Innovation in 2009 for the Homeflame fire range; which was designed to reduce carbon emissions and running costs through market leading high efficiency.

The Queen's Awards for Enterprise exist to champion the UK's most enterprising, creative and sustainable organisations. The awards celebrate the successes of British business and the vital importance of enterprise and innovation to the economy.

* When compared to a standard inset living flame fire with efficiency of 65%.

A stylish decorative gas fire

Uniting soft edges, gentle curves and a sleek chrome finish, the elegant Quattro is available with either a pebble or coal fuelbed.

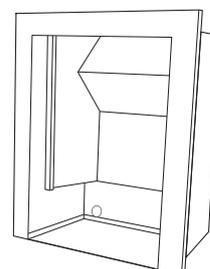

Decorative gas fires or DGF's, can be used in large chimney openings to create a realistic open fire look as unlike inset fires, they consist of just the fire basket, without the "box" unit surrounding it.

DGF's are hassle free but with all the charm and mesmeric appeal of a real fire.

Coal fuelbed

If you want to improve the heat performance of your DGF, or need to give a finished look to the chimney opening, you can use the DGF with a box unit (also called a Chairbrick) which will bring the chimney opening to a standard 16" x 22" and whose ceramic sides will reflect the radiant heat back into the room. The chairbrick comes with both black and brass magnetic trims as standard, but brushed chrome trims are also available.

Solid design with traditional detailing

For homes who want the benefit of a real fire the Arden and Willow are compact and most living spaces would be able to accommodate them. Best quality cast iron solid fuel stove, suitable for logs, coal and peat. Top or rear flue (5"/125mm diameter). Controlled airwash for cleaner glass & aids combustion.

Whilst providing warmth for a room, our wood burning stoves, Arden, Willow and Hamlet can also provide free hot water. An add in boiler element can be connected to the stove to provide heat to water, towel rail / radiator and will help reduce primary heating costs. For more information please visit www.valor.co.uk

Important notice: All dimensions stated within the specification table are intended as guidance only. Please consult installation instructions before commencing any building work.

Specifications Key

GL&W Can be ground level or wall mounted - ashpan is not separate.

Wall Can only be wall mounted - ventilation requirement prevents ground level mounting.

Plinth Can be ground level or wall mounted. If wall mounted the fire would require a small plinth to support the ashpan which is not attached to the main fire.

^ Spanish Basket may require a plinth depending on the depth of the opening.

NB: Most of the fires installed with the requirement of a 'Plinth' are primarily intended for ground level installation with a back panel and hearth. As if raised some of the inner workings may become more visible than intended.

◆ LPG conversion kit available.

† Due to the sheer number of varying flue boxes and pre-cast flues it is not possible to advise on which fires are suitable until the existing fire has been removed. If the width at the rear of the precast flue starter blocks is less than 300mm wide the minimum depth of the opening will be not less than 154mm.

When using a replacement chairbrick, fireplace openings required are Height 555-565mm Width 405-445mm Depth 305mm.

> Balanced flue fires can be installed inset / semi-inset into the wall cavity with the 3" spacer, or flat against the wall with the 5" spacer. Fan Flues can be inset into the wall.

■ Indicates minimum height above fireplace opening.

* Indicates appliance depth.

The right to change specification without prior notice is reserved. No liability is accepted for problems caused by poor installation or misuse of product.

Efficiencies

Efficiencies quoted on the product pages are quoted in nett calorific value. This is to aid comparison of efficiencies across manufacturers. To use the efficiency value as part of the UK government SAP energy rating of dwellings, then gross efficiency should be used. For details of gross efficiency please refer to the installation manual which is available online at www.valor.co.uk

Appliance Dimensions

Accessories

Valor can supply a range of accessories in order to tailor installation requirements

05337W2	Electronic battery ignition kit for radiant fires
0583141	Timber frame kit for balanced flue fires

As with all products from Valor Fires you can be assured of the following:

Quality

Every single fire manufactured at our purpose built factory in Erdington is gas and leak tested for your peace of mind. Our products are manufactured in accordance with the internationally recognised Quality Management System Standard ISO 9000:2001.

Gas safety

All our fires are fitted with a flame safety device which cuts off the gas in the unlikely event that the pilot flame is blown out, plus our Oxysafe system which monitors the level of oxygen in the room and cuts off the fire if there is insufficient oxygen in the room.

After sales service

We are so sure of the quality of our fires that in the unlikely event of any mechanical problems during the warranty period we will send out one of our expert Heateam engineers to rectify the problem free of charge*.

General Notes

All gas appliances must be installed by a competent Gas safe Registered Installer and in accordance with the manufacturer's installation instructions and they should not be fitted directly onto a carpet or floor of combustible materials. Please note that certain parts of the appliance will become hot. A suitable guard is therefore recommended where the very young or infirm are concerned. Our policy is one of continual improvement and development. The right to change specification without prior notice is reserved. Reproduction of colours is as accurate as photographic and printing processes will allow. The statutory rights of the consumer are not affected. *No liability is accepted for problems caused by poor installation or misuse of the product.

Valor Fires are delighted to join COCAA to keep harmful products of combustion out of the living room.

heateam is a Baxi Heating UK operation dedicated to providing state-of-the-art customer service. Its role is to support our products long after they leave our factory. Tel: 0844 871 1565. Email: service@heateam.co.uk
